Armstrong Project Update

- **Production Casing Successfully Set on Ellislie Plantation #1 Well**
- **Workover / Completion Rig Scheduled**

Dear Sir/Madam,

The Board of Austin Exploration Limited (ASX: "AKK") is pleased to update the market on the Company's first oil well at the Armstrong Project, the Ellislie Plantation #1 well.

On March 10th, U.S. Central Time, production casing was successfully installed and disassembly and removal of the initial drilling rig, platform and support equipment began. The Ellislie Plantation #1 well is now awaiting arrival of a workover / completion rig, at which time the operator will begin the completion process. Plans are to perforate the Benbrook sand from a depth of between 6455.5-6460.5 feet. The workover / completion rig is anticipated to arrive on or about March 19th.

Due to the high oil saturation, porosity and permeability levels found in the core samples, and the operator's extensive experience with these hydrocarbon sands, Aus-Tex and the operator have chosen to perforate the identified zones and move the well into production as quickly as possible.

The Company anticipates the move from completion to production to be accomplished in three to four weeks time. During this period, the operator plans to lay 1.7 miles of 3" polyflex pipe to the saltwater injection well, complete site works for the central tank battery and heater treater, and install all separation equipment. The operator is currently working to simultaneously complete the well and set the pumpjack while laying the delivery pipeline.

HELD INTEREST

Interest Holder	Working Interest	Net Revenue Interest
Aus-Tex Exploration, Inc.	50%	37.5%
Operator	50%	37.5%
