North Carrizo, Yolanda Villarreal #1 – (Day 25 market update)

- **Third oil show of 27 feet and a fourth oil show of 85 feet encountered in the Upper B zone**
- **Oil shows for upper "B Zone" lateral total 297 feet**
- **Natural gas now flaring from the well**
- **Drilling into primary target "E Zone" on schedule to begin within 48 hours**

Dear Sir/Madam,

The Board of Austin Exploration Limited (ASX: "AKK") is pleased to provide the following progress report on drilling of the North Carrizo, Yolanda Villarreal #1 oil well located in Dimmitt County, Texas. Aus-Tex Exploration, Inc, Austin's 100% owned USA subsidiary acquired this prospect in May and the well was spud on June 16, 2010.

- Additional oil shows in the upper "B" horizontal were encountered over the last few days. A total of four oil shows have now been encountered in this zone. Two of these four shows have already been announced to the market.
- A third oil show over 27 feet in the "B" interval was from 6,898'-6,925'. Orange-yellow fluorescence was noted. Oil surfaced to the skimmer tank and a 15 feet gas flare occurred.
- The fourth oil show of 85 feet in the "B" interval was from 7,295'-7,380'. A dull orange fluorescence was noted. Oil surfaced to the skimmer tank and a 4-8 feet gas flare occurred.
- The operator finished the secondary target- the upper "B" zone lateral on Sunday, July 11, 2010. They then pulled back into the vertical hole and began preparing to enter the targeted "E" zone lateral. They have now deviated for entry and are building angle. Drilling is currently at 4,872'.

Anticipated Post Drilling Next Steps

After completion of both the B and E zones a retrievable packer will be set above the Austin Chalk with a wireline. The hole will then be filled with 2-3% KCL water so that the drilling rig can be moved off location. A workover rig will then be brought in for completion operations. The packer will be removed and the KCL fluid swabbed. Swabbing will continue until oil is recovered at which time the oil will flow on production or a pumpjack will be installed and the well will be placed on production. A pumpjack is already on standby.

There is a gas pipeline immediately adjacent to the location. The operator has already negotiated a price for a hot tap into the gas line. Gas could be flared while the well is producing oil until the hot tap is installed.

About the North Carrizo, Yolanda Villarreal #1

This well represents the largest oil well to be drilled to date by Aus-Tex since the company was recapitalized in October last year.

- Daily production estimates for this well have been calculated by the third party reservoir engineer to range between 250 to 950 BOPD
- As previously announced, Reservoir engineers have calculated the North Carrizo prospect reserve potential at 200,000 to 250,000 barrels of oil
- Aus-Tex will control a 45% WI through casing point, a 36% WI after casing point and a 27.36% NRI
- The operator has extensive experience with drilling in Austin Chalk formations and an excellent success record. They have been involved in a continuous drilling program since 2004. The program has produced 15 drilled locations, 14 are currently producing with an additional 14 Proven undeveloped locations identified. Lowest production from any single well is 250 barrels of oil per day.
